

Waste Site Reclassification Form

Date Submitted: 6/3/2004	Operable Unit(s): 200-UR-1	Control Number: 2004-080
Originator: C. R. Webb	Waste Site ID: UPR-200-W-52	
Phone: 373-5573	Type of Reclassification Action: Rejected: <input checked="" type="radio"/> No Action: <input type="radio"/> Interim Closed Out: <input type="radio"/> Closed Out: <input type="radio"/>	

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

A contamination spread from the 241-S Diversion Box occurred on September 15, 1958. It contaminated the ground around the diversion box and an oval shaped area from the diversion box extending southward and includes the south end of the 207-S Retention Basin. Immediately following the release in 1958, the soil was saturated with water and turned over with a bulldozer.

In 1992, a two large soil contamination areas (UPR-200-W-165 and UPR-200-W-114), located northeast and east of 241-SX Tank Farm, were scraped and consolidated onto other existing nearby waste sites and into the 207-S Retention Basin. After collecting soil samples of the scraped areas, the areas were removed from radiological control. Some residual contamination from this Unplanned Release may have contributed to the contamination found in these areas.

Basis for reclassification:

The site is not marked or posted. The area where the incident occurred was surface stabilized in 1992. This UPR may be a Duplicate of UPR-200-W-51. The release descriptions are very similar. It is recommended this site be reclassified to Rejected (Consolidated) into UPR-200-W-51.
